PROJECT FACT SHEET

Pennsville, NJ

September 2005

CONGRESSIONAL INFO: Sen. Corzine NJ, Sen. Lautenberg NJ, Rep. LoBiondo NJ-2

AUTHORITY: Section 205, Flood Control Act of 1948, as amended; Flood Damage Protection.

PROJECT DESCRIPTION: The study is investigating flooding problems. A disposal facility, owned and operated by the Corps of Engineers, has caused flooding in Pennsville Township and caused the Township to construct a pumping station to alleviate flooding. Local interests desire additional pumps. Local interests have also recently expressed concerns over flooding in other areas of the township from Salem Creek.

PROJECT STATUS: The study has been initiated and an initial evaluation is underway. Both structural and non-structural alternatives will be evaluated. Structural alternatives, designed to alter flood water flow include: levees and floodwalls, channel improvements, alternate channel alignments, and detention basins. Non-structural alternatives include various flood-proofing techniques to reduce or prevent flood damage to properties that are vulnerable to flooding during a storm event.

FINANCIAL SUMMARY:

	PDA	CONSTRUCTION
Total Estimated Project Cost	\$100,000	TBD
Allocation thru FY 2004	\$10,000	0
Allocation for FY 2005	0	0
Capability for FY 2006	0	0

CRITICAL ISSUES: None.

SPONSOR: Township of Pennsville, Salem County
